

Cymulate for Healthcare

Validate Your Cyber Defenses Before an Attack

Cyber attackers have increasingly targeted the healthcare sector, not only due to the high value of compromised patient data but also because of its extreme sensitivity to disruptions. For healthcare providers, any downtime can have dire consequences, as ransomware attacks can disrupt critical healthcare services and business operations.

While having the right cybersecurity policies and solutions in place is critical, it is just as important to verify that those controls are working as expected. Healthcare organizations choose Cymulate for automated cybersecurity validation, proactively confirming that defenses are robust and reliable—before an attack occurs.

Healthcare Customer Benefits

Validate Defenses Against Emergent Threats

Automate Continuous Security Testing

Optimize Defenses with Remediation Guidance

Cymulate enables us to test our defenses against the latest cyber threats as they emerge, prioritize remediation efforts, and improve our security team's incident response skills.

- Jim Loveless, CISO, Nemours Children's Health

Cymulate is a force multiplier for my small team. I can use it to easily test efficacy in a fire-and-forget automated manner.

- Eric Bowerman, Chief Information Security Officer, Elara Caring

I really like the product. Super fast deployment and visibility on your network and major attack vectors.

- Team Leader, Healthcare and Biotech Organization

If you want a BAS that can test all security domains, including lateral movement testing, choose Cymulate. We compared Cymulate against other BAS platforms, and there wasn't anything out there that could meet our wants and needs in a BAS like Cymulate.

- Senior IT Security Analyst, Healthcare and Biotech Organization

About Cymulate

Cymulate is the leader in exposure management and security validation. More than 500 customers worldwide rely on the Cymulate platform for continuous discovery, validation, prioritization, and guided remediation of security gaps before attackers can exploit them.
